**If the sound of a cash register is music to your ears, take your cue from the drycleaner who uses J-M Hyflo®**

## **The economist.**

He's in business for the same reason you are.

A fair profit.

Which explains why his solvent filter is J-M Hyflo—the only diatomite filter aid designed for drycleaning.

Because J-M Hyflo helps assure the kind of job that builds repeat

business. It stops dirty solids and carbon before they mess up customers' garments and mess up your reputation, too.

What's more, you get maximum clarity. At the highest flow rate. With the least waste.

So you use less, and pay less.

Just ask the man who knows from experience.

Or ask us for Handbook FA-50A, the textbook used in professional drycleaning courses.

Johns-Manville, Box 290-C, New York, N.Y. 10016. Cable: Johnmanvil. Hyflo is also available in Canada.

Three for the money.

**Columbia economy engineering takes an extra pass at the high cost of producing steam**

### **COLUMBIA CT**

**HIGH DOME VERTICAL TUBELESS STEAM BOILER**  
ASME constructed, National Board registered, UL listed. Sizes 5 to 25 h.p., gas or oil fired. Fully factory assembled and test fired.

Today's market demands economical operation . . . and the built-in savings provided by this remarkable boiler can be especially important to you.

Columbia economy engineering means higher operational efficiency. A three pass flue travel is just one of several of its significant features. The baffled extended heating surface forces the hot gases to pass *three times* the length of the boiler. And that makes possible significant reductions in your bills for fuel.

It delivers the peak performance of the horizontal boiler . . . but takes a minimum of valuable floor space. It eliminates the need for a stack or chimney, just a vent will do. And it's designed to make servicing and inspection a breeze.

See for yourself what more than a quarter century of Columbia economy engineering development can mean to you.

#### **COLECTRIC**

Fully insulated high pressure electric steam boilers. Pre-assembled and completely wired, 1 to 45 h.p.

#### **WATER HEATER**

Tankless indirect steel water heaters with copper coils . . . gas or oil fired. High performance, yet low initial and operating costs.

#### **HRT BOILER**

Fully packaged horizontal return tubular type steam generators—exceptionally low operating and maintenance costs. 6 to 100 h.p., oil, gas or dual fired.

A CARD OR A CALL WILL BRING YOU ALL THE SIGNIFICANT DETAILS.

When it comes to boilers, those in the know come to Columbia

## **COLUMBIA BOILER COMPANY OF POTTSTOWN**

Cincinnati, Ohio 45219

In order to speed up the acquisition of buyer information, we have streamlined our annual Gold Book Buyer's Guide & Directory. A straight-forward listing of drycleaning / laundry product categories is presented in alphabetical order beginning on page 24. Those companies manufacturing a particular product will be listed alphabetically under the appropriate category. For your assistance, we have preceded each company entry in the Equipment and Supply Guide with a Reader Service number. (Also, as usual, each advertisement in this issue carries a key number). To find out more about any entry or item of interest simply circle the corresponding number on the appropriate Reader Service Card and drop the postage-free card or cards into the nearest mailbox. We have provided six cards with a continuing chronological listing of key numbers; two cards face page 3 and four face page 62. For your further convenience, we have provided a listing of Supply and Machine Distributors on pages 52 and 53. Zu Freeman continues his discussion of Valclene solvent on page 54.

At this time of year it might be advantageous to review some of the benefits extended to us in the drycleaning industry by the Laundry And Cleaners Allied Trades Association. For fifty years, this great National Association has collected market data, conducted business education programs, helped supervise the national trade show and served as liaison between the Allied Trades and over 300 national, state and local customer associations.

Of particular interest to us, LACATA has spelled out fair practices for its members to follow in dealing with their customers. The Association is authorized by participating member companies to assist in resolving problems between customer and supplier. Its manufacturers sponsor the labelling of poly bags to assure that the consumer gets what he pays for. LACATA members who produce perchlorethylene have sponsored a program on the safe handling of this solvent. It includes literature and a sound motion picture and has helped educate thousands of operators of drycleaning plants in the safe handling of the solvent. The Association promotes the drycleaning industry on a national and local basis in cooperation with leading customer associations to improve the industry's image and assist the drycleaner in getting business back in the plant.

Why spend \$3000 (or more) for a steam tunnel?

# "The Finishing Touch" by Huebsch gives you high production at far less cost.

For example, one high volume commercial drycleaner has cut dress finishing from a 4½ to a 3 day-a-week job with "The Finishing Touch" steam-air chamber. Here are some of the reasons to buy Huebsch:

**Controlled oscillation** — "pumps" steam through garments, gently shakes out wrinkles. Oscillation can be turned off, if desired, to suit garments and fabrics.

**Fast operation** — 10 garments in 1½ minutes or less. Automatic cycling with separate, pre-programmed controls for steam, condition, and dry.

**"Air-tempered" steam** — unique venturi action of Steam-Air Mixer creates supermoist, lower temperature steam for faster wrinkle removal.

Many other outstanding features: exclusive, automatic, slide-out garment rack for easy loading, recirculating air flow to conserve steam, condensation-reducing insulation, durable corrosion-resistant stainless steel and epoxy coated exterior, and Huebsch-Quality construction. Call your distributor or write.

**Save  
money  
on your  
favorite  
protein  
stain  
remover**

**Buy a  
"4-Pack"  
this  
week**

You can save \$2—50¢ a bottle—by buying **QwikGo** in the handy 4-bottle carton. And you'll save valuable time because **QwikGo** is speedy... simple to use... and sure. Safe too because it's non-ammoniated. Can be used before or after cleaning.

Order a **QwikGo** "4-Pack" from your jobber now

**P.S.** You save even more when you buy **QwikGo** by the case (24 bottles). Ask your jobber.

**Get more GO-power with the "GO"Line...**

## A NEW REFRIGERATED MODEL IN PHILCO-BENDIX COM-PAC DRYCLEANERS

Rear view of new refrigerated COM-PAC Dry Cleaner. With all the features of the popular 39 minute COM-PAC plus refrigeration for fast 22 minute drycleaning.

You have a choice now. The regular PHILCO-Bendix COM-PAC Drycleaner or the new refrigerated model. Both are available from your PHILCO-Bendix Distributor. If you encounter high temperature water problems in your location, or want to turn out a fresh load of drycleaning every 22 minutes, you need this new *refrigerated* model.

Now! Ask your PHILCO-Bendix Distributor about these new COM-PACS. If you haven't added drycleaning, investigate the COM-PAC now — for its *added* income and the *increased* laundry traffic that the addition of drycleaning usually produces.

Ask your Distributor about the Philco Finance Corporation "No Down Payment Plan," or write for details.

# new PURITAN "PROFIT"

**NEW "RESCUE" FILTERS**  
rescue 90% of your filtration  
operating & labor costs!

## lowest-cost ever available from Puritan! Prices start

*Specially engineered for operations grossing up to \$1200 a week! Now save big money on labor, maintenance, solvent and detergent . . . get better cleaning that keeps customers coming back! Just add one or both of these low-cost Puritan units to your present systems — and rescue profits you're losing right now!*

new "RESCUE" FILTER gives your operation all the money-saving, time-saving advantages of Cartridge Filtration. With easy "Pay as you Profit" terms, just a few dollars a month gives you modern savings, top quality cleaning, frees you from the drudgery of powders, muck, and mechanical breakdowns.

Easy installation! It's a snap to do-it-yourself. No special tools or technical background needed. Complete step-by-step instructions supplied.

Easy life! Change cartridges only once-a-month or less, depending on volume. Takes as little as 2 hours of labor a year.

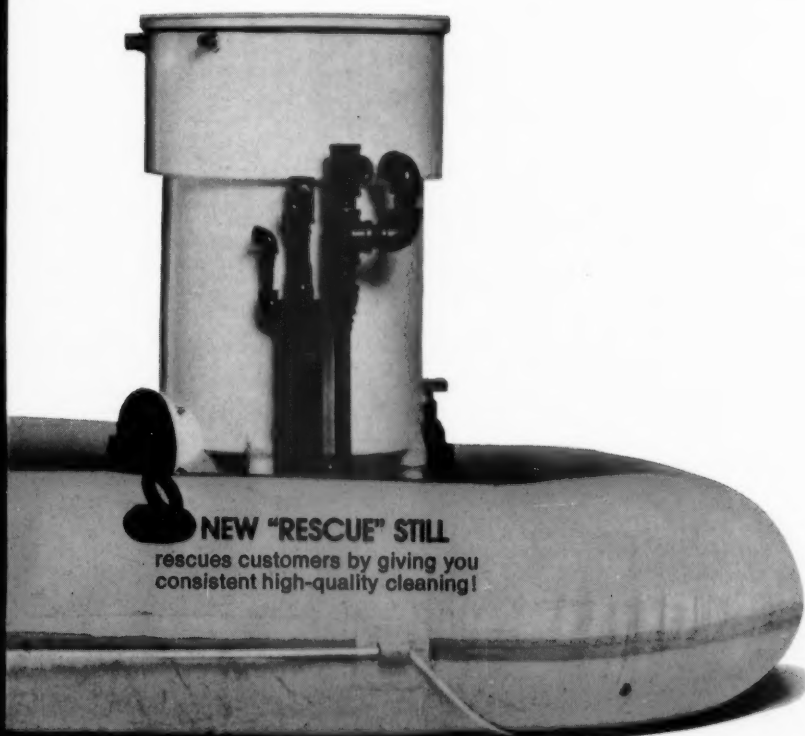

Easy profit rescue! Saves over 90% of powder system costs in operating labor, maintenance, solvent and detergent. Delivers superior filtration in both perc and petroleum solvent systems.

**"RESCUE" 400** — for up to 30 lb. machines. Holds four Puritan carbon-core cartridges and one all-carbon

cartridge. 54" high by 34" wide by 15" deep.  
Shipping weight 200 lbs. . . .  
low price only \$595.00

**"RESCUE" 600** — for up to 40 lb. machines. Holds six Puritan carbon-core cartridges and one all-carbon cartridge. 54" high by 34" wide by 25" deep.  
Shipping weight 300 lbs. . . .  
low price only \$695.00

# RESCUE" UNITS

## NEW "RESCUE" STILL

rescues customers by giving you  
consistent high-quality cleaning!

**low as \$595— easy "PAY AS YOU PROFIT" terms\***

new "RESCUE" 1000 STILL costs only half as much as you'd expect! Gives your operation the distillation it needs for bright, professional-quality cleaning customers demand! You can "add-it-on" whether you now have cartridge filtration or a powder system. Just get the Puritan "RESCUE" 1000 STILL and rescue that business now going elsewhere!

You'll find the "RESCUE" 1000 easily installed, simple to operate, and trouble-free year after year. Gives you complete, efficient removal of solvent-soluble soil. Extends cartridge life too!

- **Exclusive feature!** Unique two-pass heating element concentrates heat, delivers fast start-ups

without excessive steam pressure. Requires only 35 lbs. of steam, only 1½ HP boiler output.

- **Exclusive feature!** Residue well has heater element for fast cook-off of solvent. No need for a sweep. Drains easily, completely.
- High distillation rate: 10-15 gallons per hour under normal conditions.
- Easy-to-clean resin interior, stainless steel condenser. Coil and chamber easily removed.
- Takes little space—only 23" wide by 23" deep by 42" high. Weight 150 lbs.

Low Price only \$595.00

# We've got "the system" what do you have?

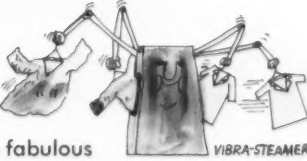

The Vibra Steamer system for all plants is the most efficient wrinkle removing processor on the market today. It has proven capability to handle all the new fabrics and synthetic fibers for the market that is already here. The Vibra Steamer is an entire system custom engineered to fit the particular needs and space requirements of all plants. It consists of an adaptable feeder/conveyor/storage line network, a push-button controlled cabinet that automatically steam finishes, shakes and fluffs the garments, and includes a number of standard components.

The Vibra Steamer is the most thoroughly planned and developed system on the market today. Western Automation Corporation, in department store operations, took the time in testing and improving the Vibra Steamer to save you money. Money which will be saved on installation and maintenance costs because of proven features. The result is a professional wrinkle-wrecking system that is efficient and dependable, qualities that are often lacking in many of today's systems.

For information on "The System" fill in the coupon.

## One is for mix-it-yourself drycleaners.

For years, cost-conscious, quality dry-cleaners who mix their own cleaning solutions have relied on DOW-PER® dry-cleaning solvent—so much so, that it has become the quality standard of

the industry. Others prefer the convenience, cost savings and consistent, quality results of DOW-PER® C-S dry-cleaning solvent—the one and only complete solvent system in ready-to-

The Dow Chemical Company, Inorganic Chemicals Department, Midland, Michigan 48640.

## The other does everything for you.

use form. Either way, the name to remember in drycleaning solvent is Dow—*manufacturer of the quality standard of the industry.*

# Introducing the New Knit World of Drycleaning

**New thinking is Permac's answer  
for the Drycleaner to the Textile Revolution**

*VALMAC F-12  
using DuPont's Valclene®*

## **Valmac F-12 using Du Pont's Valclene®**

VALMAC F-12 is the newest, safest and most economical approach to the drycleaning of knits and other new textiles. It's a **25 lb. professional drycleaning machine**, using Valclene®, for professionals.

®A duPont registered trademark for drycleaning fluid.

## **Permac's New Spraymatic**

Pre-spot right in your basket. Your work is spotted every time without the labor. Also, finishes and after-treatments can be automatically applied in the basket.

## **Permac's Advanced Automation**

Every new PERMAC has pre-programmed program cards for automated knit drycleaning. There is no handling of garments. Human error and the strain on knits by transferring are eliminated.

**Send for  
information  
today!**

**AMERICAN PERMAC, INC.**  
ONE COMMERCIAL AVE., GARDEN CITY, N. Y. 11530

## Cal Dry lets your customers smile on rainy days

Once you start using Caled's new Cal Dry for water repellency treatments, you'll see a lot of cheerful customers. They'll appreciate the protection they get with Cal Dry. And you'll appreciate their smiles and increased business.

Cal Dry is colorless and non-flammable. It won't form scumming or stiffen garments in bath solution with detergents. There's no melting necessary with liquid Cal Dry so it's easy to use. And your customers' garments—even colorful prints—will retain their original texture, colors and body when you use Cal Dry to make outerwear water repellent.

What's more, we'll help you tell customers about it. Just ask for our colorful new promotion kit with button tags, window posters and display materials.

Call your Caled man or distributor representative. Caled Products, Pennwalt Corporation, Brentwood, Maryland.

## Use Your Directory For Planning

On the following pages is a complete listing of the major products in the industry and the companies who make them. This fast-reading buying guide is designed so it can be used both by management and purchasing personnel. By keeping your copy on file you can turn to it again and again. We also suggest that the directory can be used as a planning as well as a purchasing guide. Use it to get the technical information and literature you need when you start thinking about expansion or re-equipping your plant. Many of the companies listed are also willing to send their represen-

tatives to assist you in formulating new workflow arrangements, equipment or inventory changes. By planning ahead you can avoid production bottlenecks and make changes with a minimum disruption of production schedules. You can also avoid being forced to replace items under pressure, which puts you in a better bargaining position on prices. For new products developed for the industry keep posted by reading "New Products," the products column which appears every month in DRYCLEANING WORLD magazine.

## In The News

### Congress May Increase The Minimum Wage

Washington, D.C.—Action by Congress to raise the minimum wage from the present \$1.60 per hour to \$2.00 per hour on January 1 will result in a major sabotage of Phase II of the administration's economic control plan. This prediction is supported by the results of surveys of the National Federation of Independent Business studying the impact of the minimum wage law on the economic health of the nation over the past four years among the nation's 5 million plus independent enterprises. Paradoxically, such legislation violates three major announced goals of the economic plan. One is that an increase of 25 percent in the minimum wage would exceed the announced intentions to hold future pay raises at a much lower rate.

The legislation also does not tie productivity to wages, another announced goal of the control plan. In addition, while it is the announced objective of the control plan to create a half million new jobs, so far this is a theoretical assumption. But the surveys conducted by the National Federation of Independent Business indicate that in the first year following the adoption of the minimum wage law of 1966 more than 680,000 people lost their jobs and were shunted onto welfare rolls.

## HyPur's little big filter.

### In less than 4 square feet it pumps 1500 gallons per hour.

And you'll save more than just floor space. Every system comes with a pressure prelint filter. Removes lint before it gets to the main filters. Cartridges stay cleaner, last longer.

HyPur's activated carbon towers control fugitive dyes. Solvent stays cleaner, clothes come out brighter. Carbon in the towers is separate from regular filtering cartridges. So you get full life from both.

For more information on why more and more Dry Cleaners are choosing HyPur filter systems, write: C. Fred Hastings, Dept 2-AD, Commercial Filters Division, The Carborundum Company, Lebanon, Indiana 46052.

## HyPur. The inside story of effective filtration.

Outside, cartridge filters look pretty much the same. Inside, where it counts, HyPur® has what it takes to do the job better, last longer and save you money.

Every HyPur filter has 1 3/4 inch pleats for bigger load capacity. All our filter paper is resin-coated to resist impregnation and increase flow rates as much as 50%. Our paper ends are cured with deep layers of Plastisol to prevent solvent bypassing. Plastisol bands provide permanent pleat spacing for longer filter life, and improved operating efficiency. And the HyPur full-length exterior hole pattern gives you better solvent drainage. All these features are standard on HyPur

paper wrap and metal wrap cartridges.

You'll get the same quality in our solid carbon, carbon core, carbonless and magnesol cartridges; carbon and magnesol bags; and Honeycomb® Filter Tubes.

For more information, write: C. Fred Hastings, Dept. 1-AD, Commercial Filters Division, The Carborundum Company, Lebanon, Indiana 46052.

## HyPur.<sup>®</sup>

# There's another side to our pretty face.

Turn the HyPur coin-op drycleaner around and you'll see features that make it the most profitable system you can buy.

You'll see why routine servicing is quick and easy with practically no downtime. You can change cartridge filters in four minutes or less. No tools, no spillage mess.

Exclusive Sensetronic control provides a short cycle that's consistent with good drycleaning. The machine shuts off automatically when garments are "dry enough", eliminating wrinkling and shrinkage.

Simplified control panel tells you when to change cartridge or service the machine . . . and lets you repeat or hold any cycle for testing or to flush and washdown the cylinder.

Get full information before you buy. Write: C. Fred Hastings, Dept. 1-CO, Commercial Filters Division, The Carborundum Company, Lebanon, Indiana 46052.

## **Arma SHIRT TAG System**

**ARMA**  
by **Pittsburgh Tag**

*Time and Work Saver,  
**PROFIT MAKER!***

**Ideal For Any  
Size Volume!**

**When  
you Use  
Arma-PITTSBURGH  
YOU USE THE BEST.**

#### **FASTER MARKING-IN-**

Unique dispenser allows buttonhole to slide over tag.

#### **FASTER, MORE ACCURATE ASSEMBLY-**

Each shirt has its own assembly place.

#### **SHIRTS CURE PROPERLY-**

System allows time for shirts to cure properly.

#### **BETTER WORK FLOW-**

Convenient size lots.

#### **CONTROLLED SHIRT COUNT-**

Know number of shirts finished each day.

Send for this new brochure detailing and describing our New Shirt Tag System to save you time and money! It includes procedures and suggested methods to help you make more profits and make your customers happy!

**Send For  
PT-Arma's Complete Line  
Catalog.**

**PT ARMA MAKES IT THEIR BUSINESS MAKING YOUR BUSINESS EASIER**

Now we make a great line of solvents...

last longer.

**Dow announces...  
the filter that's more than  
just another filter.**

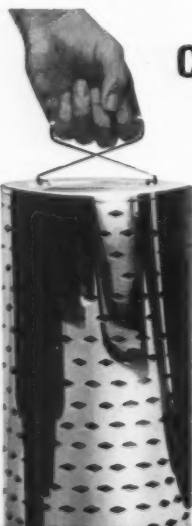

It's the first filter completely *engineered* for drycleaning. And the first ever developed by drycleaning experts. We studied all the cartridge filters we could get our hands on, and then with our own drycleaning experience, we redesigned, reengineered, tested, retested and came up with a completely new cartridge with components that all work together as a precise, efficient filtering system. The result: You get a filter that saves solvent, drains faster, lasts longer and takes the color out of your solvent better. Plus the manufacturing care and quality control that will give you the kind of consistent performance you'd expect from drycleaning experts like Dow.

**DOW**

New Dow cartridge filters fit any standard housing, and can be used with any drycleaning solvent. They come in your choice of three types: Carbonless, Carbon Core, All-Carbon. They're the "freshest" filters you can buy. Because each is packed and sealed in its own heavy-gauge plastic bag to protect the filter from dirt, moisture and handling. Each Dow filter is manufactured under rigid, quality-control standards, and assembled in an automated process to ensure consistent, uniform, high-quality filtration. The designs are backed by Dow's advanced drycleaning technology, years of research and development and unrivaled experience in drycleaning.

**Call your Dow drycleaning distributor.**

## **TickeTag 4-in-1 Identification Forms help Drycleaners earn more money**

Mr. Bert L. Frazier  
Tupelo, Miss.

TickeTag originated 20 years ago. It was the first 4-in-1 identification form to provide:

1. Customer's Receipt.
2. Office Record.
3. Customer's Invoice and Plant Assembly Check.
4. Six, seven or eight Pre-numbered Tags (all with identical numbers).

Today TickeTag has proved itself. Drycleaners all over America, in

Latin America and in Canada are using these forms. Martinizing dealers have used TickeTag ever since its inception.

Such success has naturally created imitators. But why consider imitations when the original, proved TickeTag 4-in-1 system is proving every day to more and more drycleaners that it is a money-making plan. Write for TickeTag samples today.

**TickeTag Corporation Inc.**

P. O. Box 1568, High Point, N. C. 27261

**TICKE TAG**  
4-IN-1 IDENTIFICATION SYSTEM

## SPEED CHECK

## AUTOMATIC CONVEYORS

### SPEED PRODUCTION PROFITS!

It will pay any laundry or dry cleaning plant operator to investigate the *complete* line of Speed Check Automatic Conveyors. There's a model for every type of operation, for use on one floor or two . . . covering the entire plant, if desired, from collection point to delivery point. Automatic drop-off and remote control insures maximum efficiency and work speed for added plant profit!

#### SPEEDY SAYS:

"IT CAN WORK FOR YOU!"

# Dedicated to Clean Living

Clean living for a cleaner world begins with individuals. Clean personal living is a vital part of a clean environment. Duplex is dedicated to the clean idea, and we think the equipment we build is dedicated too. Dedicated to dependable service and quality performance for you and your customers. The DA-4 Duplex Steam Air Finisher is a good example. It's probably the most versatile steam air finishing unit on the market today. One base, three forms, and a perfect finish for most or almost every garment in the shop. Duplex is dedicated to the idea of quality service to the dry cleaning industry. We believe a clean world is a better world. Give us a chance to prove it.

For free descriptive color literature, write: International Duplex Corporation, 4101 Charlotte Avenue, Nashville, Tennessee 37209.

# FOR THE SMALLER PLANT

THE AJAX MINI-FINISHER WITH

SINCE 1929, THE LEADER IN DESIGN  
A MORE PROFITABLE PRESS FOR EVERY PURPOSE  
1055 WEST 80 NORTH TEMPLE STREET  
P. O. BOX 449, SALT LAKE CITY, UTAH 84110  
TELEX NUMBER 38-8345

Ajax research established the importance of a carefully engineered combination of jet steam and environmental steam. Now, the benefits of that research are yours in the remarkable Ajax Mini-Finisher. ■ High quality and high volume require a specific blend of steam conditions and times, so the Ajax steam system was designed to produce the fastest possible fabric saturation in the shortest possible time. The complete saturation you need for quality finishing starts the moment the door closes. First, a powerful surge of jet steam penetrates the garments both front and back.

Then, the environmental steam inside the chamber completes the process. In just minutes, every fiber of every garment is completely saturated with wet steam, and the fabric restored to its original shape. ■ You'll like the Mini-Finisher's ease of operation too. The operator simply puts hangared garments on a spindle. The door on which the spindle is mounted automatically turns, placing the garments inside the Mini-Finisher. The cycle starts immediately. A few minutes later, the operator can take out six beautifully finished garments. Six more go in as the door is rotated. The production volume varies from 120 to 175 per hour, depending on the quality required. ■ That's the important difference between Ajax and other finishing systems. The Mini-Finisher gives you the benefit of a completely researched and carefully engineered steam finishing system. Not just a box with steam vents. So: no half-finished garments. No wasted time. Fewer re-dos and more pass-ups. ■ Now, the advantages of steam tunnel finishing are available to the aggressive smaller plant, in the Mini-Finisher; a compact and profitable expression of the industry's most advanced engineering. Check with your Ajax man. Ask him for full details.

## Pollution control: A corporate responsibility

Pollution and pollution abatement have become important aspects of every business. They affect budgets, profit and loss, position in the community, corporate image, even the price of stock in some cases.

Pollution is a now problem that is receiving now attention from astute businessmen. Water treatment plants, fume scrubbers and filtration systems, land reclamation, plant beautification, litter prevention, employee education programs, are all types of things industry is doing to help in the pollution fight.

But regardless what a businessman is doing today he must be considering pollution control efforts for tomorrow.

One thing he can do is write for a free booklet entitled "71 Things You Can Do To Stop Pollution." It doesn't have all the answers on pollution. But it might give a businessman a few ideas for both today and tomorrow.

### People start pollution.

### People can stop it.

Keep America Beautiful

# EXPERT ADVICE

ZU FREEMAN

## Fluorocarbon Cleaning Has Popular Features

**P**redictions for a rosy future for fluorocarbon cleaning which less than a year ago brought only raised eyebrows from some drycleaners and allied tradesmen are now getting a long hard look. Many visitors to the recent convention and exhibit in England came back completely convinced of its merits. Last month we covered some of the inherent advantages which this new solvent brings to the industry. Here are some of the ways that drycleaners are getting the most out of their \*Valclene operation.

The greatest appeal of fluorocarbon cleaning is its fail-safe qualities on a large variety of articles ranging from plastic to fur. This feature is popular with coin or budget cleaning operators as well as top quality custom cleaners because it justifies the installation of the unit. Once convinced that Valclene units are competitive with other systems in regard to operating costs, the merchandising potential and low labor costs are especially appealing to the plantowner.

The early units which were introduced during the experimental era of coin cleaning like much equipment of that era, were a disappointment due to unproved design, the yet to be developed market, and the then prevailing concept of unattended coin-ops. A survey of coin operators who have brought Valclene into their current operation finds agreement on many factors.

The fast cycle, 14 - 15 minutes gives one unit the capacity of two or three conventional coin-ops and saves space. The safety of the solvent on plastic trim which is so popular on low priced and children's garments, and on the wide range of heat sensitive synthetic fibers gives a competitive edge over other coin-ops and

**\* Because Valclene is the only fluorocarbon source widely available in the United States the Dupont trade name is used generically in this article.**

professional plants who are uninformed or overcautious.

The automatic solvent maintenance through distillation eliminates the messy and sometimes physical chores involved in filter and cartridge maintenance. Clean solvent insures that the customer gets uniform quality no matter how busy the coin-op becomes.

The factors which appeal to the coin operator make even more sense to the package plant owner who offers coin-op, coin type or bulk cleaning as part of his service. Even though he has adequate capacity to handle current volume package plant operators are installing coin type Valclene units to expand on or replace existing equipment.

The investment here is justified by the fact that in some cases, a new service is offered. More important, however, is the fact that there is now a low cost and no risk method of handling plastic trim, suede and a wide variety of articles which heretofore had to be processed by hand, farmed out, or refused entirely. It enables the plant owner to increase his market, upgrade his service and cut his labor costs.

### The Third Type

A third type of Valclene installation is a specialty unit used in high volume plants which make no attempt to promote a do-it-yourself service. In this case the unit is installed in the production area as an auxiliary to conventional perchlorethylene equipment. Not only is it used to handle the specialty work which is available to a high volume plant, but much of the fragile or delicate classifications can be put through without the need for breaking lots or waiting to gather a load which would be economical to run in a large unit.

The result is an upgrading of quality and greater hourly production for the cleaner. This is especially valuable where a

drycleaner has less experience or has other duties beside loading and unloading the cleaning unit.

One maker of high style top priced cotton dresses specifies on a hang tag that the garment should be processed in Valclene. Examination of a display of knits in a popular store reveals that nearly every dress and slack outfit says, "Do not process or dry at over 100 degree temperatures." How else but fluorocarbon?

### Unit Actually Large

Drycleaners seeking their own evaluation of the new system have had several opportunities at recent local conventions and exhibits to examine both the coin-op and professional plant version. In fact at the moment working installations are to be seen in practically every section of the country.

The fourth type of Valclene installation included in this survey is the totally fluorocarbon plant. These are growing in number as the use of this solvent increases. It is this type of plant that will provide many answers in regard to the future of the industry.

Many casual observers of the Valclene operation have an image of small capacity coin type units with their relatively simple cycles. This is far from a true picture. Fluorocarbon units are available in a wide range of capacities with

*Zu Freeman is DRYCLEANING WORLD's Technical Editor. He is*

*the director of the Freeman Textile Research Laboratories. Zu also operates*

*two successful drycleaning plants. Readers are invited to send in questions on technical and operating problems concerning drycleaning, spotting and specialty services.*

provisions for varied cycles and injections of detergent sizings and moisture, and are adaptable to many of the operations which have been found desirable in modern high capacity top quality operation.

Generally poundage and wheel sizes have been based on realistically rated hourly capacities. For example, a check of Valclene plants indicates that they are able to maintain satisfactory quality in a average dry-to-dry cycle of 14 to 15 minutes.

Unlike coin or auxiliary installations where the advantages of fluorocarbon may be unfairly compared with the out-of-context limitations of the existing cleaning system, the newer system is still to be evaluated. Except in a few plants, specialty work and non-solvent cleanable items comprise a relatively small if highly visible proportion of total volume.

On the other hand, run of the mill garments and households may pose no fabric problems but can be liberally covered with several types of ground in soil spots and stains. These are currently being handled by the greater solvent power of

perchloroethylene aided by detergent moisture and mechanical action while circulating at the rate of several thousand gallons per hour.

Commercial size Valclene equipment can presumably duplicate all of these factors in a shorter cycle based on faster drying. The unanswered question at the moment is the spotting picture.

#### Left Handed Benefit

Conventional cleaning systems are, when properly operated, extremely tolerant of the entire range of stain removers ranging from water solutions to heavy bodied ink removers. Valclene operators are limited to one type of spray spotter. Heavy bodied paint and grease removers don't flush out readily, and so-called volatile solvents containing petroleum products or perk are absolutely taboo.

On the other hand, many food and beverage stains containing sugar, tannin or albumin which are usually more difficult to remove once a garment has been drycleaned and deodorized with

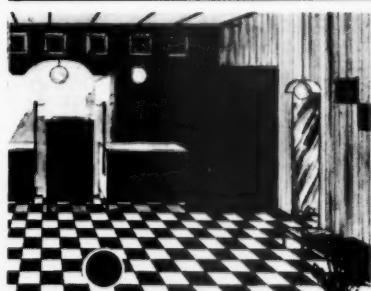

heat in conventional equipment is easily treated after cleaning with Valclene.

One all Valclene operator mentioned a left handed fringe benefit he enjoyed. He had recently experienced what would have been a major calamity with a conventional system; a lipstick in a twenty-five pound load of soft wools.

Fortunately, whatever dye that was loosened was suspended by the solvent and detergent and flushed away. The cool rinse and low temperature drying did not melt the wax base so that the lipstick was removed intact from the undamaged load with only a mopped brow as evidence of the near tragedy.

The above incident is an example of some of the emotional factors which are generating enthusiasm for the new system. There are other factors which may have more solid implications. A survey of local fashion shops indicate some of the behind the scenes public relations which the new system has going for it. ☐

# IN THE NEWS

*Silver Spring, Md.*—Consumers are being confused by labels accompanying washable fashion wear which give no indication of drycleanability. Usually washable outerwear is also drycleanable. If there is valid reason that a particular garment should not be drycleaned, then this fact should, of course, be clearly stated. But if there is no reason to rule out drycleaning then it can be very important to reassure consumers that drycleaning is an available option. Oily stains present a particular problem, especially on polyesters and durable press fabrics. Often they don't come out in washing but lend themselves to ready removal in drycleaning. The Voluntary Permanent Care Label Guide adopted by the Industry Advisory Committee for Textile Information in 1967 states: "Care instruction, preferably of a permanent type which continue to appear on the product during its normal period of usefulness, are recommended when any of the following purposes or conditions are to be served: (1) when a care practice normal for a general type of textile product might result in harm to a particular product; (2) when a particular care practice is essential to the best overall performance of the product though not potentially harmful; (3) when a consumer might be in doubt that a product can be laundered when in fact laundering is possible or drycleaned when drycleaning is possible; (4) when a textile product is so basically new that a consumer would have no traditional knowledge of its proper care." With increasing numbers of married women entering the work force, more and more families want to be able to rely on professional services for the maintenance of apparel and household furnishings.

In the best interests of all concerned NID recommends that manufacturers reassure customers in label instructions that they have this option of drycleaning even though the garments are washable.

## Emery Adds to Sanitone Staff

Toronto, Canada—David Choban was appointed sales representative for the Sanitone Drycleaning Division of Emery Industries (Canada) Ltd. The announcement was made by H.F. Chord, manager of the Drycleaning Products Division in Toronto. In the drycleaning industry since 1958, Choban has extensive experience in plant management, sales, sales, maintenance and advertising resulting from his ownership of two drycleaning plants in Canada. Choban will be responsible for sales and service to licensed Sanitone drycleaners in British Columbia and Southern Alberta, and will reside in North Vancouver, B.C.

**BESTRONIC SEALERS AND SHRINK-PAK EQUIPMENT DO THE JOB!**

Regardless of the shape or size of your product, no other Shrink-Pak method can match the efficiency, economy and speed of Bestronic equipment. The Bestronic Sealer overwraps your product with a clear plastic film, seals it, ready to be sent into the Beseler Shrink Tunnel for the perfect Shrink-Pak system. Available in manual, semi-automatic and fully automatic models using the same problem-free system with rapid adjustment to suit individual needs. Precision-engineered for service-free use.

Makes the use of kraft wrapping obsolete in printing and bindery operations.

### Schleisman Joins Thompson-Hayward

**Kansas City, Kansas**—Norman Schleisman has joined Thompson Hayward Chemical Company as a Textile Maintenance Sales Representative. In his new position, Schleisman will be responsible for the sale of Thompson-Hayward's complete line of laundry and drycleaning products in Des Moines and much of the state of Iowa. Prior to joining Thompson-Hayward, Schleisman was a sales engineer for Saxe-Freeman Company in Des Moines, Iowa.

## Western Automation Makes Move

Western Automation has moved to new, and expanded headquarters. In moving to their new facilities, pictured above, provisions have been made for expanded production, stepped up research, and better-than-ever service to "Vibra-Steamer" users. Among the new features offered is a "Monitored Customer Service" facility which offers continuous phone contact to "Vibra-Steamer" users around the clock and even on holidays. Faster service can be assured to Vibra-Steamer customers with the new and improved plant facilities.

## Do it two ways better with Risdon.

### Mark it.

with THE NEW IMPROVED **BIC** LAUNDRY-DRY-CLEANER PEN. Put it in writing—on fabrics, tickets, tags, invoices, labels. This is the only indelible marking pen which offers the world famous BIC reliability to the laundry and drycleaning industries. An exclusive from Risdon, with no-smear, no-clog BIC point. More than a mile of writing. Won't fade. Strong metal pocket clip and plastic cap for point protection.

### De-lint it.

with THE PATENTED, PRE-CUT, BIAS-SLIT RISDON LINT REMOVER. Unveils a fresh, new surface in an instant. One that's extra tacky for positive pick up of all unwanted lint, hair, dirt, etc. Heavy duty reusable handle with nylon bearings for effortless action. Reusable wrap for surface protection.

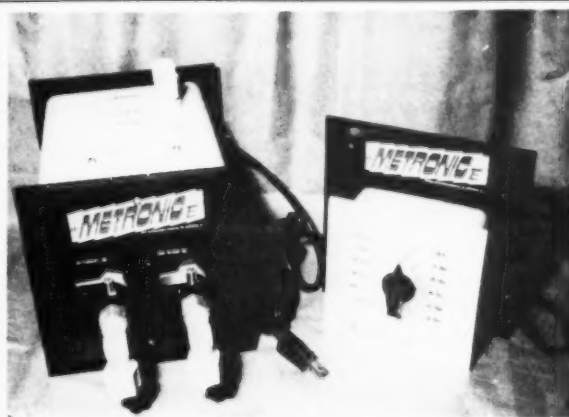

Order now from your Risdon distributor.

## In The News

### Association Promotes Savings Bonds

*Virginia* — Two Virginia area drycleaners, Paul Hurt (left) and Dave Norford congratulate Washington, D.C. drycleaner Horace Butcher, owner of Bendee Cleaners, for joining the Bond Wagon and promoting the sale of U.S. Savings Bonds in his call office. The Northern Virginia Drycleaners Association initiated a Savings Bond campaign among its members and customers several months ago.

The Treasury Department has proudly spread the word about the patriotic efforts of the D.C. area drycleaners to its offices across the country hoping to encourage other local drycleaning associations to follow the example of the Northern Virginia cleaners. Also on hand for the occasion were Stanton Osgood (3rd from left), U.S. Savings Bonds Promotion Representative for Washington, D.C., Mrs. District of Columbia Savings Bonds, Rhonda Williams and Mr. Butcher.

### Crime Insurance Protection Offer

*Hartford, Conn.*—Laundry proprietors in many areas where crime insurance has been broadly unavailable, unaffordable or both, can now buy burglary, robbery and vandalism protection at reduced rates through Aetna Life & Casualty. Recently, Aetna began administering a federally-funded program that makes crime in-

surance protection available at affordable rates to laundry proprietors and other metropolitan businessmen in Connecticut, Massachusetts, Missouri, New York, Ohio and the District of Columbia.

Any businessman in these areas can buy federal protection through Aetna regardless of previous insuring experience and without fear of cancellation based on the number or size of losses. The only

grounds for cancellation will be violation of the terms of the contract or illegal conduct of the policyholder. The new federal policies provide up to \$15,000 in commercial burglary, robbery and vandalism protection.

Premium rates for coverage are based on the gross receipts of the business and FBI crime statistics for each metropolitan area. A typical premium for \$1,000 coverage on a laundry with annual gross receipts of \$150,000 in a medium risk area like Cleveland, Ohio would be \$300. Premium for the same coverage on the same laundry in the highest risk areas such as New York City would be \$325. Deductibles for the federal crime coverage hinge on the annual gross receipts of the business and can be either \$100, \$150 or \$200. If a loss should occur, the policyholder is responsible for the amount of his deductible or five percent of the loss, whichever is greater.

Businessmen wishing to qualify for the new federal crime insurance protection need only give the correct information on their applications and meet the programs minimum standards for protection devices.

### Tracing NID's Management Courses

*Silver Springs, Md.*—In 1949 nine students took the first NID Management Course. They wore two button suits and their coats had wide lapels. Collectively they traveled about 17,000 miles to and from their plants to improve their managerial ability. They were a proud group. Twelve years, 1,295 graduates, and 99 classes later, 12 students graduated from NID's 100th Management Course. These men also wore two button suits and their coats have wide lapels.

However, in 22 years, the course content has modernized and tenuous tastes have changed. Time has also brought dramatic change. The students of the 100th Management Course collectively traveled approximately 93,000 miles in order to improve their professional ability.

## In The News

These students came to Silver Spring, Md., from such far away places as: Caracas, Venezuela; Brussels, Belgium; Amersfoort, Holland; Sydney, Australia; Dunedin, New Zealand; and Sapporo, Japan. The Japanese student, Tadashi Yoshida, could not speak English. But he was an excellent student. The Australian student, Barry Sayers, grew up in the drycleaning business. But he was willing to travel 23,000 miles to and from NID "because it was about time I started thinking management." The New Zealander, Mark Wellington, had taken several other management courses. But he came to Silver Spring, "because I couldn't get these production techniques anywhere else in the world." Mark concluded, "NID is the drycleaning headquarters of the world. So it's the most logical place to come to."

Jerry Begg is from Kalispell, Mont., and is a college graduate with a degree in finance. He felt he

had already studied everything in the NID Management Course. "But this course made things specific and relative." A wise person once said that people really don't change. Perhaps this is true. The graduates of NID's 100th Management Class were also a very proud group.

# **YOU MUST DIVERSIFY TO SURVIVE**

**LET NORGE SHOW YOU  
THE WAY TO NEW PROFITS  
WITH SELF-SERVICE**

**EXISTING PLANTS  
CALL OFFICES  
NEW LOCATIONS**

40% of all drycleaning poundage is self-service. Expenditures for self-service textile maintenance exceeded \$1 billion in 1970. Self-service has grown at the rate of 15% a year during the last decade. The conventional commercial drycleaner cannot afford to ignore this trend.

Equip with Norge and you equip with the best. Over 50% of all self-service drycleaners in use today are Norge manufactured.

10-lb. drycleaner

20/40-lb. drycleaner

# **NORGE**

**FEDNOR CORPORATION  
EDISON, NEW JERSEY 08817**
